mib_db59gw>, thank you - I might give it a try mib_db59gw>, I'm getting an error: "Failed to initialize the graphics device" mib_db59gw>, nvidia driver installed, ah yes, looks like you have to enable it. the other question is if it is plugged into the laptop or a separate monitor mib_db59gw>, It's a separate monitor, mib_db59gw>, mib_db59gw>, if I start X, I get: "No suitable MFA module available"
mib_db59gw>, and I'm not getting the intel panels... and if you do startx mib_db59gw>, nope / wibble: let me know if you get any messages from X, mib_db59gw>, well, it does seem to load, I get a pretty green screen mib_db59gw>, it *kind of* works! mib_db59gw>, but it's not usable X always took me a while to load but I would just say if it takes you over 10 minutes to start you are most likely going to run into an issue well than you have a good base. but what is the issue? mib_db59gw>, tried a different screen resolution, and while it's a bit better, it's still pretty unusable could be a driver issue mib_db59gw>, xrandr seems to think I'm using the Intel GPU, how do you know? mib_db59gw>, 82157476af
